A streak of new funded projects for Vitsolc

ICFO's 11th Spin-off company advances towards market solutions in transparent PV

September 29, 2023

In March 2022, after ten years of intense research from the Organic Nanostructured Photovoltaics researcher group led by Prof Jordi Martorell, ICFO transferred to VITSOLC, ICFO's 11th spin-off company, its patented technology to produce unique transparent photovoltaic (PV) technology where visible light transmission can be largely decoupled from energy conversion. Since that time, members of the VITSOLC team have continued to work to improve the TRL of the PV technology. Over the past months, they have received funding and new projects that will increase the marketability of their products.

ACCIO Start-up Capital grant: VITSOLC is one of 20 companies to receive funding in the 2023 call for ACCIO's start-up capital grants. This program provides up to ?100k in direc support for emerging technology start-ups that need financing to carry out the initial phase of the business, develop their product or service and validate the business model to reac the market. Beneficiaries of the first 4 calls have created 500 jobs. These same compani s have gone on to secure 33.5M? in private fundin

RETOS Public-Private Collaboration: VITSOLC and ICFO were recipients of a RETOS gran from the Ministry of Science and Innovation and the The State Research Agency (Agenci Estatal de Investigacion) to carry out a joint R+D+I project titled i¿½Transparent photovolt ic windows for the Electric Vehiclei¿½ (EV). Funding for this project was awarded within the 2021-2023 state program to pr mote scientific-technical research and its trans

Neotec-CDTI: The Minsitry of Science and Innovation, within the plan for Recovery, Transformation and Resilience (Plan de Recuperacion, Transformacion y Resiliencia) financed the Neotec Projets to help launch new start-up businesses that which require the use of technologies or knowledge developed from research activity and in which the business strategy is based on the development of technology.

i¿½VITSOLC is moving forward in our quest to develop and commercialize our transparent

photovoltaic technology. The support we have received through these grants over the past year has been enormously helpful in achieving our goals and also to allow us to access additional private funding that is essential for our company's growthi¿½, asserts Os ar Aceves, VITSOLC's Chairman of the Board. i¿½e have a winning technology and are very optimistic about the advances we have made in just over two years since our constitution.i¿
